SUMMARY

Full-stack developer with a frontend focus, building features across React/TypeScript interfaces and Python backend services in enterprise software. Practical experience with API integration, authentication and authorisation, data-driven interfaces and automated testing on both sides of the stack.

EXPERIENCE

Mavisoft | Rotterdam, Netherlands

Enterprise software for geospatial data management and AI-assisted inspection.

Full-Stack Engineer | May 2026 - Present

- Built the first version of role-based access control across backend and frontend: a reusable permission check on Python service endpoints, permission-aware React UI and role management, and fixes for data and actions that could cross organisation boundaries
- Implemented two-factor authentication (TOTP) across the Python user service and the React front end, including enrolment, trusted devices and session handling, covered by an extensive Pytest and Jest test suite
- Improved performance across frontend and backend: added a batched thumbnail lookup so image views no longer load full-size files, reduced redundant and repeated API requests, and added measurement and a CI bundle-size check
- Reworked the dataset overview screens and their data flow: fewer backend calls per page, one place for data fetching, explicit loading and error states, and automated tests
- Improved file-upload workflows: large files upload directly to object storage and imports run as background jobs, replacing four separate upload screens with one

Frontend Developer Intern | Nov 2025 - May 2026

- Built the image gallery and viewer in React with debounced search, keyboard navigation and decoupled components, and created the first set of reusable UI components

PROJECTS

Nom Nom, food ordering app | GitHub

Full-stack MERN app: Express REST API with MongoDB, JWT authentication and multi-step checkout, tested with Jest and Cypress, with code checks in GitHub Actions.

Mavisoft corporate website (personal build) | Live | GitHub

Responsive website built with Next.js, React, TypeScript and Tailwind CSS.

SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, Tailwind CSS

Backend: Python, Node.js, Express, REST APIs, gRPC

Data: PostgreSQL, MongoDB, Redis

Security: Authentication (TOTP two-factor, JWT), role-based authorisation

Testing & Tools: Jest, Pytest, Cypress, Docker, Git, GitLab CI

EDUCATION

BSc Computer Software Engineering, Azad University, Tehran | 2010 - 2014

Full-Stack Web Development, HackYourFuture, Amsterdam | 2024 - 2025

LANGUAGES

Persian: Native | English: Professional working proficiency | Dutch: Limited working proficiency
